

PRICING & PACKAGES

DETAILED OVERVIEW

FEATURES	FREE	BASIC	ENTERPRISE	PLATINIUM	DESCRIPTION
CAPABILITIES	Use it for free.	Be up and running fast - easy to use.	Unlimited use of status codes and you can customize your own routing workflow	Automate and optimize your entire internal workflow.	
USERS	4	10	10	100	Number of users included in the package price. Additional users can be added.
SHARING USERS	4	4	10	10	Sharing User is an external person invited to have access to specified pages in WebProof just by sending a email invitation.
STORAGE	1 GB	5 GB	10 GB	20 GB	Projects are split into pages; every new proof of a page also counts as a page. A typical page size based on low-resolution PDF is 250 KB, which is equal to 20.000 pages/5 GB.
STATUS CODES	3	3	unlimited	unlimited	Status Codes can be, for example, 'NEW PROOF' (ready to review), 'CORRECTION' (= Markup done, please redraw), and 'APPROVED' (is approved). In Enterprise and Platinum you can create your own Status Codes to match your own processes, or use separate status Codes for each of your clients
USER ROLES	2	2	unlimited	unlimited	A Role is a template used to define which permissions a user has in Webproof. Multiple users can have the same Role.
PROJECT	unlimited	unlimited	unlimited	unlimited	A project can be a magazine, book, brochure, catalogue, website, etc.
CORPORATE IDENTITY	✓	✓	✓	✓	You can brand WebProof with your own company logo to be displayed on login page and on email notifications.
SETUP FEE			✓	✓	Setup fee is for Enterprise and Platinum only. For Enterprise, it covers establishing of the system on our servers, as well as 1 day on-site training. For Platinum, you also get an extra day of on-site setup of WorkFlow. Travel expenses are not included in setup fee.

COMMENTING TOOLS	FREE	BASIC	ENTERPRISE	PLATINIUM	DESCRIPTION
TEXT HIGHLIGHTING	✓	✓	✓	✓	Highlight text for replacement, without using Acrobat. WebProof is the only product on the market offering real Text Highlighting. Even better, the original text is automatically copied into a new Sticky Note for editing. No more retyping the whole thing - or making more mistakes! Text Highlighting functions in all our supported languages, including Greek, Russian, Arabic, Chinese, etc.
STICKY NOTES	✓	✓	✓	✓	You are likely already familiar with sticky notes from Acrobat's Note Tool. WebProof of course also supports Sticky Notes,
ROTATE	✓	✓	✓	✓	When rotate pages, stickers keep position.
MULTI STICKER	✓	✓	✓	✓	With Multi-Stickers you only need to add one comment when similar changes are to be marked in several places. Each Sticky Note in WebProof has an ID unique across all versions of that page.
BOX DRAWING	✓	✓	✓	✓	Need to mark an images, object, or other larger area on the page? No problem. Using the Box Drawing tool, it's fast and easy to draw around the area you mean, and make comments in a Sticky Note that points to that area.
TRANSLATE	✓	✓	✓	✓	Automatically translates a text, whether in a PDF or a comment, to and from 60 languages. A good feature for either doing brochures, catalogues, etc. in several languages or for giving a better communication, when commenting between different languages.
DRAWING	✓	✓	✓	✓	As in Photoshop, you can now easily customize a mask in an area for a precise add-on comment.
PROOFING MARKS	✓	✓	✓	✓	The old-fashioned handwritten proofing marks can now be made electronically, either by using just the 24 different proofing marks or in combination with the text highlight function. It is fast and there is no problem understanding what is intended, in contrast to handwritten proofing marks.
MULTIPLE POINTER ICONS	✓	✓	✓	✓	In some cases, it can be practical to choose another pointer box icon. You have 9 different icons to choose between.
POINTERS OVERVIEW	✓	✓	✓	✓	Write only one Multi-Sticker, and add multiple pointers to those places.

TOOLS	FREE	BASIC	ENTERPRISE	PLATINIUM	DESCRIPTION
TEXT SEARCH IN PDF		✓	✓	✓	Searching for an old job? WebProof lets you search for text and numbers inside PDF documents! Results are displayed page by page, project by project. Click on a result, and the page will open with the text marked for you to find easily. This is a great tool for search-and-replace type Updates.
ARCHIVE		✓	✓	✓	Ever need to go back in time and retrieve long-finished jobs? Maybe you've been asked by a Client to rerun an ad from last year, with just a price change. Offer the WebProof Archive as a service, so they always have access to finished jobs.
MOVE, INSERT & DELETE PAGES	✓	✓	✓	✓	You can in the project move pages around, insert pages and delete last version or all versions.
SEARCH & SORT		✓	✓	✓	This is your daily To-Do list? Quickly find the pages or specific text you are looking for.
EMAIL NOTIFICATIONS	✓	✓	✓	✓	Don't always log into WebProof, if you want to know when there's something for you to do? Get notified by email! You can choose to get sent an email the instant a page is ready for you to work on, or have your notications bundled and sent periodically as you choose (e.g.every 2 hours or once a day). This function is great for subcontractors, and clients too!
SMS NOTIFICATIONS		✓	✓	✓	Get instant notification on via SMS to your mobile device.
PRINT WITH STICKERS	✓	✓	✓	✓	Print with Comments creates a landscape PDF with the proof on the left side, Sticky Notes on the right side, and all the pointers in between! Great as a check-list for the Graphic Designer. Great for review meetings or client documentation. Ther's never confusion with page or version numbers - they're clearly marked. So are all Sticky Note details,like user name, Reference ID, and date/time stamp.
PRINT READY LOG	✓	✓	✓	✓	WebProof logs all proofing activity, which can then be printed in a neat listing. Great for justifying your invoice.
AUTO COMPARE VERSIONS	✓	✓	✓	✓	WebProof instantly Compare two versions, pixel by pixel, and see a warning box around anything that's different! Detect unintentional changes and 'hidden' differences, like moved objects, text falling out of text boxes, color changes, RIP errors, etc. What a safety feature!
PROJECT GROUP OVERVIEW	✓	✓	✓	✓	Working on several projects? Group Overview gives you an instant overview of how many pages in each project need attention. No need to open each project. You get a fast and easy overview of how close each project is to completion-and where to focus.
TIME ZONE	✓	✓	✓	✓	WebProof has users in more than 100 countries and of course there has to be adjustment for the time zone you are in so that you can see everything in real time for you.
EXPORT LOG		✓	✓	✓	WebProof logs all proofing activity, which can be exported for one or more projects. Produces CSV or XML files.
NOTIFICATION LOG	✓	✓	✓	✓	When an Expressuser has been send and WebProof got the confirmation from the receiver email system, it is logged. A good documentation.

MODULES	FREE	BASIC	ENTERPRISE	PLATINIUM	DESCRIPTION
3D PAGE FLIP	✓	✓	✓	✓	Our 3D Flip pages, which is free for you, but which you can invoice your customers when you give them a link they can place on their website and in this way publish on the internet. This is a great alternative to your present Page Flip supplier and it has the same functionality. Attach movies and can be viewed as well on PC, Mac, iPhone, iPad and Android.
STATUS FLOW			✓	✓	WebProof uses a Status Flow methodology for managing proofing routing workflow amongst users. By defining various Page Status to occur as each page progresses from step to step, and assigning function rights only to certain user(s) depending on the status, you can design and implement a controlled routing workflow. You are also able to implement proofing routing workflow logic. You can design WebProof's StatusFlow to match your current workflow.
HIDE PAGES			✓	✓	For the highest possible security, WebProof allows you to specify which people can see which pages, and not see other pages. This is important for sensitive documents, like annual reports for public companies on the Stock Exchange. Typically, figures or designs are made to be visible only to very few people - and even then with no print or download ability.
NOTIFICATION CUSTOMIZATION			✓	✓	Enables you to set up when and how often users should receive e-mail or SMS notifications, and whether on all projects or just some. You can also customize the design and text inside these notifications.
CUSTOM VIEW CUSTOMIZATION			✓	✓	Choose between several built-in Custom Views or create your own. Custom Views are displayed when showing a whole project. Should they be displayed as Cover+content as spreads, or would you like page thumbnails viewed as chapters? Editors can flip through the magazine as a reader's spread, and supervisors can quickly detect bottlenecks preventing each imposition layout from being ready for print.
EXPRESS USER LOG			✓	✓	Gives you a complete log of Express User activity. When did you set them up, when did they login, when did they approve, etc.
EXPRESS USER BANNER			✓	✓	Insert a small banner ad at the bottom of each email invitation sent to Express Users. You could say, save 20% on your next ad if you book now. The ad can be hyperlinked to your ad booking site.
PROJECT STATUS			✓	✓	By setting up your own rules examining Page Status of individual pages, Webproof can determine an overall project Status for you.
BIG DATA BENCHMARKING REPORTS			✓	✓	It is possible to get a benchmark report with all the statistics available in the WebProof database. With this, you have all the figures you need as background for optimizing a proofing process. This Benchmark Report Generator is customized for each customer. Departments, endusers, sales people, project managers, graphic users, Express users, etc. all work in different ways. It can be very difficult to point out what is right and what is wrong. It might be the proofing process that needs changing or reduce production time and/or the number of proofs. There are customers who already now, has reduced the number of proofs by over 50% on comparable tasks, by use of the Benchmark Report.

WEBFLOW	FREE	BASIC	ENTERPRISE	PLATINIUM	DESCRIPTION
WEBFLOW				✓	<p>WebFlow lets you trigger and control the movement and renaming of files from A to B between different systems, like to/from WebProof and your front-end MIS system, and to/from WebProof and amongst your back-end printing systems (for the Split, Preflight, RIP sequence, etc.) WebFlow is not only for controlling PDF graphic files, but also for any other type of file these systems need. That means you can design a set-up such that projects or jobs automatically route through your entire order / design / print process.</p> <p>When one person's step or an electronic process is complete, the project moves to the next step immediately. See here below the world of automation which is now open for you, with WebFlow.</p>
AUTO CREATE PROJECTS				✓	<p>WebFlow can when new ads/projects appear in your ad booking system and initiate new ad projects in WebProof - with the same name and details! No need for manual creation.</p>
EMAIL CONNECTOR				✓	<p>E-mail Connector lets WebFlow extract PDFs and other designated types of files from POP3 e-mail accounts and attach them to pages or ads in WebProof. Regular Expressions are used to identify which e-mails are of interest and to extract other important information from them.</p>
IMAGE DATABASE				✓	<p>Image Database has the advantage of making images available to all their WebProof users - including their Clients and other users external to their organization.</p> <p>WebFlow manages all your high resolution images locally and transfers a low resolution version to WebProof. All ITPC metadata is also transferred and can be searched and sorted as you like in WebProof. We have seen image database functions used under various scenarios. One client saves all logos and images from previous projects for later use. Another client finds that when starting a new campaign or project, typically there are many images to choose from initially. A third client produces print advertising that frequently re-uses images from a typical collection such as logos, branded images, generic images (like flowers), etc. All three find images quickly, and can let clients and designers find images quickly - wherever they are.</p>
XML CONNECTOR				✓	<p>WebFlow and WebProof can receive an XML file from other software and appropriately elect the action to take. It could be to attach the information to specific pages or ads. Such stored XML data values are then searchable in WebProof. For example, with an agency name, consultant name, or order number, etc., one could find projects and pages which received this data.</p>
INDESIGN CORRECTION				✓	<p>You are now able to do corrections directly in the original InDesign file using the familiar WebProof interface. See the result right away. Works as well on fancy tables.</p> <p>Good for fast small changes or languages shift. Save time and money.</p>
CATALOGUE BUILDER				✓	<p>Use the WebProof Catalogue Builder together with the InDesign Server and get auto produced 100 posters or 64 pages in minutes, only based on a template and a XML-file input.</p>
PORTAL				✓	<p>A web page where your customers can upload data into WebProof. It is an easy streamlined way to receive data into your workflow. A good alternative to using email or FTP.</p>

WEBFLOW	FREE	BASIC	ENTERPRISE	PLATINIUM	DESCRIPTION
CLUSTERING FAILOVER				✓	Enables active-standby clustering of the WebFlow server on your premises. WebFlow writes all data and configuration information to a standby server, so the second server can take over if your server fails.
MIRROR/ SYNCHRONIZE				✓	Mirror / Synchronize maintains a realtime backup mirror of your WebFlow data structure to another location.
MEDIENET CONNECTOR				✓	Import PDF and DSC files from the Ritzaus Medienet media server and upload to WebProof, including meta data contained in the DSC file.
MPRESS CONNECTOR				✓	Connects to MPress ad production software.
ADBASE CONNECTOR				✓	Connects to Atex AdBase (formerly Mactive) ad production software.
FILEMAKER CONNECTOR				✓	Connect to FileMaker and transfer order-related data to WebProof.
EXTRA WEBFLOWS				✓	Multiple instances of WebFlow can connect to the same instance of WebProof, which can be useful when outsourcing graphics work or when you have multiple, geographically spread branch offices. Because WebFlow supports network folders and FTP, you can even let WebFlow control and manage production across multiple offices, over WAN or the Internet - it's up to you.
